

Environmental Policy

We are committed to protecting the environment, including prevention of pollution, and conserving global resources through sound environmental management of our products and services in connection with our business activities.

The Vice President, Ultra Energy UK is responsible for implementing this policy.

Specifically we will:

- Comply with and, where appropriate, exceed the requirements of all national, regional, local environmental legislation and any other requirements the business subscribes to, including the safe storage and use of sealed and open radioactive sources.
- Seek to prevent environmental pollution with regards to our undertakings.
- Consider the environmental impact of our products and services in order to ensure they are energy efficient, where possible reusable, recyclable or disposed of safely.
- Work with customers and suppliers to encourage them to consider the impact of their services and products on the environment, and seek solutions to end of life products.
- Seek to reduce the consumption of resources and promote re-use and recycling.
- Promote environmental awareness through suitable training, instruction and supervision.
- Apply appropriate methods to ensure this environmental policy is implemented effectively.
- Seek to achieve continuous improvement in our environmental performance and set objectives to achieve this.
- Consult with and employ internal and external resources, interested parties and awarding bodies in the implementation of our environmental management system.

The policy requires the full co-operation of all workers.

Giles Hall
Vice President, Ultra Energy UK
